PROFESSIONAL SUMMARY

- Full-stack AI engineer and former Technical Team Lead with 6.5+ years of production software experience building internal tools and workflows.
- Add AI where it helps people find, organise or act on information, with safeguards: validated outputs, prompt-injection defences, human review, cost and usage tracking.
- Build AI-assisted apps secure by default: access control, protected secrets and deployments, automated tests and review gates, so tools built quickly stay safe and maintainable.
- Work agent-first: sub-agent-driven, test-driven development with Claude Code, plus self-hosted automation (n8n, cron, and Hermes and OpenClaw agents controlled via Telegram and Discord) on a Proxmox lab.
- MSc Computer Science. Experience across enterprise consulting, startup and freelance work, as both team member and team lead.

EXPERIENCE

Cawosh Ltd, London, United Kingdom | Full-time

August 2024 – September 2026

Software Engineer/ Technical Team Lead

- Shaped dependable internal services that bring project workflows together and support AI features.
- Built and maintained backend services and APIs for cloud applications, focusing on dependable performance, secure access and automated testing.
- Created a document data pipeline that turned incoming PDFs and spreadsheets into validated, consistent information for downstream work. Processed approximately **5,000 documents per month**.
- Owned the technical roadmap across product and operations. Turn team needs into clear priorities, guide architecture decisions, run technical explorations and support developers through planning and reviews.

Xabium Software Solutions, Remote, United Kingdom | Freelance

November 2025 – September 2026

Full Stack AI Engineer

- Designed and deployed autonomous AI agents using Claude, Antigravity, and custom Claude Skills to automate complex, multi-step tasks within the People platform, enhancing features like smart onboarding flows and unified employee dashboard interactions.
- Optimized system prompts, context constraints, and few-shot examples to enforce reliable structured outputs UI design elements across both the public no-code landing page builder and the internal HR app.
- Bridged frontend and backend systems by integrating LLM APIs and embedding workflows, while implementing robust evaluation pipelines to mitigate prompt injection risks, ensure output reliability, and monitor AI latency in production.
- Drove iterative feature delivery through active Scrum participation (sprint planning, stand-ups, retrospectives), while elevating code maintainability and security by integrating AI-powered automated review pipelines (CodeRabbit, Qodo) and enforcing minimalist architecture using agent skills like Ponytail.

Capgemini Technology Services, Bangalore, India

October 2018 – February 2023

Associate Consultant/ Product Owner

- Served as Maximo Subject matter Expert, application point of contact and product owner for an asset management client. Supported application development and operations, prioritised work with stakeholders and led junior consultants.
- Built and maintained Java microservices application high-volume financial transaction processing, resolving a critical sequencing bug that caused data drift.
- Re-architected long-running PostgreSQL queries for a global banking client, improving data retrieval speeds by 40% through strategic indexing.
- Established JUnit test suites and coding standards adopted team-wide, reducing production-level bugs by 25% within 18 months. Awarded STAR Performer recognition.

MEAR Enterprises, Kerala, India

June 2017 – December 2017

Internship Trainee

- Internship Trainee for Software development using Java and Spring boot Framework.
- Developed scalable web applications using Java (J2SE, J2EE) and Spring MVC and JavaScript.
- Designed and developed SQL databases and wrote efficient queries to support application features.

PROJECTS

Completed projects, with ongoing feature development, bug fixes and refinement.

- **Unsheet (Spreadsheet Dashboards):** [\[Live Demo\]](#) | [\[GitHub\]](#)
A privacy-first, **local-first AI dashboard generator**. Transforms spreadsheets into interactive UIs via strictly validated LLM JSON outputs (Zod), featuring in-browser DuckDB-WASM analytics, **Vercel AI SDK integration**, and 14+ enterprise-grade **security mitigations**.
- **Product Catalogue Chat:** [\[Live Demo\]](#) | [\[GitHub\]](#)
Built a serverless **RAG** platform for complex PDFs, utilizing Next.js 15, **Supabase pgvector**, and **hybrid search** (vector + full-text) to deliver accurate, citation-backed AI responses with resumable batched ingestion.
- **Plato (LLM Application Tracing and Observability):** [\[GitHub\]](#)
A Python-based multi-tenant **LLM gateway** providing OpenTelemetry tracing, Redis-backed **rate limiting**, and **automated daily budget enforcement** for AI applications.
- **Personal Portfolio:** [\[Live Demo\]](#) | [\[GitHub\]](#)
Built with **Next.js 15**, **TypeScript**, and **shadcn/ui** featuring dynamic routing and Framer Motion animations. Self-hosted on-premises on Proxmox hypervisor with full hardware/network management; Dockerized and exposed via Cloudflare Tunnels and Tailscale VPN mesh for secure access.

INFRASTRUCTURE PROJECTS

- **Self-Hosted Server Lab:** Proxmox lab running AI and internal tools, built with Terraform and Ansible, with Cloudflare Tunnels and Tailscale for secure remote access and no open ports.
- **Automation & Services:** Use n8n workflows and scheduled jobs to reduce routine work such as document processing, notifications and backups.
- **Agents:** OpenClaw and Hermes agents controlled from Telegram and Discord for chat-based operations, including infrastructure help.
- **Software Delivery:** sub-agent-driven, test-driven development with automated code review and CI checks.
- **Security & Reliability:** environment-injected secrets, MFA, access controls, WAF rules and container image scanning.
- **Tools:** Proxmox, Terraform, Ansible, Docker, Ollama, Cloudflare Tunnels, n8n, Hermes, OpenClaw.

EDUCATION

Staffordshire University, Stoke-on-Trent, United Kingdom

July 2024

MSc Computer Science (Software Engineering)

- Dissertation: **Hybrid Reinforcement Learning** recommendation system combining **collaborative** and **content-based filtering**, outperformed either approach in isolation on hit-rate and NDCG metrics.

Kannur University, Kerala, India

July 2017

B.Tech in Computer Science and Engineering

- Capstone (**RISTS**): **real-time social media summarisation** using **incremental clustering** over streaming data at scale.

TRAININGS & CERTIFICATIONS

GDPR and Data Governance training

DevOps and DevSecOps training

Oracle Certified Java Programmer Associate

Full Stack Java Bootcamp, Jspiders, Bangalore

TECHNOLOGY SUMMARY

- **AI & Integration:** LLM applications, **RAG**, **AI agents**, **MCP**, prompt engineering, Claude, OpenRouter, Ollama.
- **Quality & Safety:** **Guardrails**, **prompt-injection defence**, **AI evaluation**, human review and application tracing.
- **Search:** Document search, embeddings, vector databases, pgvector, hybrid search.
- **Application Development:** Python, **TypeScript**, Java, FastAPI, Django, **React**, **Next.js**, Spring Boot.
- **Data:** PostgreSQL, Supabase, Redis, DynamoDB.
- **Delivery & Security:** Automated testing, **secure access**, Docker, Terraform, CI/CD, **Vercel** and **Netlify**.
- **Cloud:** AWS, Bedrock, Lambda, S3, Cognito, CloudWatch.
