

Roshan Razak

roshan.razak@outlook.com | +44 7384 049455 | roshanvrazak.co.uk | linkedin.com/in/roshan-razak

Skills

AI & Orchestration: Python (FastAPI), LangGraph, LangChain, RAG, Agentic Workflows, Prompt Engineering

Languages & Ecosystem: ReactJS, TypeScript, Java (Spring Boot), Laravel, SQL, Shell

AWS Services: Bedrock, Lambda, DynamoDB, S3, EC2, IAM, SNS, API Gateway

Architecture & Design: Microservices, Event-Driven Architecture, Multi-tenant Design, SOLID, DDD

DevOps & CI/CD: Docker, Kubernetes, Jenkins, Terraform (IaC), Ansible, GitHub Actions

Databases & Quality: PostgreSQL, MySQL, Redis, JUnit, Mockito, TDD, Integration Testing

Experience

Technical Team Lead, Xabium Software Solutions – UK Jan 2026 – Present

- **Systemic Isolation:** Architected a multi-tenant layer that guarantees **zero data leakage** between high-profile clients, enabling the platform to pass stringent third-party security audits required for enterprise expansion.
- **Self-Correcting AI:** Engineered an AI-driven underwriting system that **identifies its own logic errors** via a feedback loop, reducing human intervention by **60%** while maintaining auditability.
- **Performance Engineering:** Resolved a persistent memory bottleneck in the **React/Redux** dashboard that caused browser crashes for heavy users, resulting in a **35% improvement** in average session length.
- **Engineering Velocity:** Instituted a "Technical Debt Registry" to systematically retire legacy bottlenecks, increasing the team's sprint velocity by **20%** within the first six months.
- **Mentorship & Culture:** Mentored a cross-functional team of 6 through **Technical Design Reviews**, pivoting the group's focus from "completing tickets" to "owning product outcomes."

Software Engineer (Contract), Cawosh Ltd – UK Aug 2024 – Dec 2025

- **Cost Optimization:** Refactored an over-provisioned serverless data pipeline, leveraging **AWS Lambda and Step Functions** to cut monthly infrastructure costs by **45%** without sacrificing processing speed.
- **Real-Time Analytics:** Designed a "hot-path" for customer analytics that serves complex data in under **200ms**, replacing a legacy system that frequently timed out during peak traffic periods.
- **Infrastructure Hardening:** Automated the security lifecycle of application secrets via **AWS IAM**, removing manual rotation risks and ensuring the platform remained "audit-ready" for financial compliance.
- **Code Quality:** Standardized the use of **TypeScript** across all frontend modules, which eliminated an entire class of "undefined" errors and reduced client-side rendering bugs by **30%**.

Associate Consultant, Capgemini Engineering – India Oct 2018 – Feb 2023

- **High-Volume Processing:** Engineered a core engine to handle **millions of concurrent financial transactions**, resolving a critical bottleneck in message sequencing that previously caused data drift.
- **System Reliability:** Redesigned a failing legacy synchronization task into a **resilient background process**, reducing system downtime by **15%** and eliminating manual database interventions.
- **Database Optimization:** Re-architected long-running **PostgreSQL** queries for a global banking client, improving **data retrieval speeds by 40%** through strategic indexing.

Projects

Agentic AI Underwriting Pipeline github.com/roshan-razak/ai-underwriter

- **Tech Stack:** Python, LangGraph, Ollama, Vector DB (Chroma), RAG.
- Built an autonomous **multi-agent system** to parse insurance claims; utilized a **RAG pipeline** with self-correction loops to achieve **95% accuracy**.

Distributed Event-Sourcing Framework github.com/roshan-razak/event-mesh

- **Tech Stack:** Java 21, Spring Boot, Kafka, Redis, Docker.
- Implemented an **event-driven architecture** for high-frequency order processing, utilizing the **Saga Pattern** for distributed transactions.

Technical Lab & Research

Lead Homelab Architect

Jan 2023 – Present

- **Infrastructure Virtualization:** Orchestrates a **high-availability Proxmox (PVE)** cluster managing **LXC containers** and **KVM virtual machines**.
- **Local AI Inference:** Hosts quantized **Llama 3** and **Mistral** models via **Ollama**, utilizing an **OpenClaw AI Gateway** for private, latency-free LLM orchestration.
- **Network Security:** Achieved zero open firewall ports using **Nginx Proxy Manager** and **Cloudflare Tunnels** with **MFA/SSO** integration.

Education

Staffordshire University – MSc Computer Science (Software Engineering)

July 2024

- **Dissertation:** Reinforcement Learning with Collaborative Filtering (CF) and Content-Based Filtering (CBF) for Enhanced Personalization.

Kannur University – B.Tech in Computer Science and Engineering

July 2017

- **Project RISTS:** Engineered a **Real-Time Incremental Sentiment Analysis** system to process **social media comment streams** using **short-text** algorithms.
